Access the library’s databases page via the UWS website (or through the library links in webCampus).

Click on one of the databases you would like to search, e.g. SportDiscus.

Click on the Choose Databases link above the search box.
Place a checkmark by each additional database you would like to search. Then click OK.

The search you enter in the search bar will now be run in multiple databases simultaneously.

The search results will indicate which database produced which result.
